SUMMARY

Frontend-focused MERN Stack Developer with a strong design background in UI/UX. Builds responsive, API-driven web applications using React, Node.js, and real-time technologies, with an eye for clean, usable interfaces informed by hands-on Figma design work. Seeking a Frontend Developer role where full-stack fundamentals and design sensibility combine to ship polished, user-focused products.

SKILLS

Frontend: React, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, GSAP Animations

Backend: Node.js, Express.js, MongoDB

Tools: Git & GitHub, Docker, N8N, Figma, WordPress

PROJECTS

Uber Clone - Real-Time Ride-Booking Platform (MERN, Socket.IO, React-Leaflet, Geoapify) | [Live Demo](#)

- Built a real-time ride-booking application with live driver/rider location tracking using React-Leaflet and the Geoapify routing API.
- Implemented real-time ride matching and status updates with Socket.IO; optimized map marker rendering and geolocation updates for smooth live tracking.

FreeTube - Movie Streaming & Discovery Platform (React, Node.js, Express, Socket.IO, WebRTC, GSAP) | [Live Demo](#)

- Built a movie discovery and streaming platform with multi-server switching across 5 backup sources, instant search, and rich details including posters, ratings, cast, and trailers.
- Implemented a secure Node.js/Express proxy backend to protect API keys, with GSAP-driven animations, skeleton loading states, and seamless pagination across a responsive glassmorphism UI.
- Built a real-time "Watch Together" theater mode with peer-to-peer WebRTC video/audio chat and Socket.IO room signaling, featuring host-controlled stream sync, live text chat, and automatic host handoff on disconnect.

Banking / Ledger App - Transaction & Balance Management System (MERN) | [Live Demo](#)

- Developed a MongoDB aggregation pipeline to compute real-time account balances.
- Implemented transaction logic using Mongoose sessions to ensure data consistency across operations.
- Added JWT-based authentication for secure user sessions.

3D Motion Portfolio - Interactive 3D Developer Portfolio (React 19, Three.js, React Three Fiber, GSAP) | [Live Demo](#)

- Built an interactive 3D portfolio using React Three Fiber and Rapier physics, including a real-time physics-based 3D lanyard component and custom WebGL shaders (OGL).
- Implemented GSAP ScrollTrigger-driven kinetic text and scroll animations, plus fluid page transitions with Framer Motion.

QUALIFICATION

B.Tech in Electronics & Computer Engineering — Sharad Institute of College of Engineering

ACHIEVEMENTS

- Solved 110+ problems on LeetCode (57 Easy, 57 Medium, 5 Hard).
- Built and deployed 7+ full-stack/frontend projects to production (Uber Clone, Banking App, FreeTube, etc).
- Coordinated 2 campus placement drives as part of the Training & Placement (T&P) Cell.

EXTRACURRICULAR ACTIVITIES

- Coordinated Training & Placement (T&P) Cell activities, managing student–recruiter communication and organizing placement drives.
- Served as Event Coordinator for a national-level college event, ensuring smooth execution of all activities.
